

Town of Cumberland Proposed Communication Towers

- Proposed Communication Towers
- Tax Parcels (2021)
- West Cumberland Potential Visibility
- Range Way Potential Visibility

Notes

Map shows potential areas of visibility of any portion of the the Proposed Towers within three miles. The analysis relies on the screening effects of both topography and surface data (accounting for vegetation and structures such as buildings).

The analysis is based on a Digital Surface Model (DSM) processed at 3 ft resolution from first return LIDAR data acquired from the USGS National Map. The view height is set at 5 ft above ground level elevation.

The viewshed represents where a viewer may see any portion of a communication tower (190 ft height) within 3 miles.

Potential visibility needs to be confirmed with field investigations and other visualization techniques.
